But the “real” dynamic analysis starts here! The difference between static and dynamic analysis is simple. As I wrote at the beginning, static analysis means, that the load “is just there” and does not change in time (which means it was applied really slowly!). Dynamic analysis is precisely on the opposing side of the scale.

What dynamic code analysis is good for. Dynamic source code analysis finds accidental vulnerabilities in development or integration techniques. IT professionals perform dynamic code analysis on running software and look for signals that an outside agent can compromise the codebase.

### **What's the Use of Dynamic Analysis When You Have Static ...**

Structural dynamics is a type of structural analysis which covers the behavior of a structure subjected to dynamic (actions having high acceleration) loading. Dynamic loads include people, wind, waves, traffic, earthquakes, and blasts. Any structure can be subjected to dynamic loading. Dynamic analysis can be used to find dynamic displacements, time history, and modal analysis.
