The measurement setup is shown in Figure 2.1.2. According to the LIMP user manual, the reference resistor R_{ref} should have a value of 100 ohms, but this can vary between 33 and 100 ohms, depending on the sound card. Figure 2.1.2 Impedance measurement using the soundcard headphone output.

The Analog Impedance Meter - TOA ZM-104

This is the method that the ZM-104 uses. The meter has a high output impedance and acts like a constant current source (the current through the load is independent of the load impedance). The small voltage drop across the load is proportional to the load impedance. This voltage produces the meter deflection on the calibrated scale. The ZM-104
