A wetware computer is an organic computer composed of organic material such as living neurons. Wetware computers composed of neurons are different than conventional computers because they are thought to be capable in a way of "thinking for themselves", because of the dynamic nature of neurons. While wetware is still largely conceptual, there has been limited success with construction and prototyping, which has acted as a proof of the concept's realistic application to computing in the future. Th

## **Wetware: A Computer in Every Living Cell by Dennis Bray ...**

Dennis Bray in his superb book Wetware: A Computer in Every Living Cell has provided an extensive reading of biological function through the lens of computation/information processing. Bray meticulously details how enzyme regulation is akin to switches, their up and down regulation, like the on/off functions of a transistor, with chains of enzymes acting like electrical circuits.

## **Wetware: A Computer in Every Living Cell by Dennis Bray ...**

Wetware: A Computer in Every Living Cell (Dennis Bray, not Rudy Rucker) is a short clearly guided tour on the analogies between biology and computing. Bray walks the reader through the protein-driven algorithms that generate complex behavior even in single-celled organisms without nervous systems, biological sensory mechanisms, cellular communications, and the basics of neurons.
